

## Rotary Control Valve for Low Noise & Anti-cavitation

# 507V

Diaphragm

Worm Gear

Pneumatic Cylinder

Motorized

### Features and Benefits

For various applications such as air conditioning systems, pulp and paper mills, steel mills, chemical plants, food processing and many other process industries, the 507V rotary control valve will support your fluid control requirements.

#### Flexible control over a wide range

The 507V allows complete control over the full range from the open to the closed position. The valve can also handle high temperatures of up to 400 degrees C such as in steam lines and it will respond quickly and flexibly to any changes within the operating parameters of the process line. The 507V therefore is the optimum valve for any control system processing multiple products where the operating conditions change from time to time in accordance with process requirements.

**Model 507V is the high temperature version of our rotary control valve designed for exclusive use in the regulation of fluids.**

#### Cost-effective rotary control valve

In spite of its compact size and light weight, the 507V has a large valve capacity that minimises the energy loss of fluid at the fully open position.

This compact design reduces the required size of the actuator, installation space and piping supports. It also minimises vibration of control systems and increases the operating life.

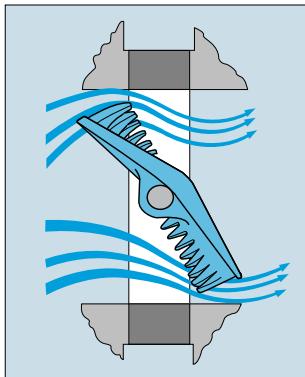

These features provide the benefit of reducing the total operating cost of your plant.

### General Description

The high performance characteristics of this model originate from its unique design with a teeth and gull-wing shaped disc that touches the seat at a certain angle (Fig.1). The teeth are arranged on the circumference of the disc towards either direction of flow. The 'touch-at-an-angle' disc assists the reduction of seating and unseating torque and facilitates smooth control of the valve.

Other benefits include high rangeability, low noise level and anticavitation.

This model covers a wide temperature range in the fluid control of air conditioning systems, pulp and paper mills, chemical plants, steel mills and food processing applications.

## General

With guide-vane-like teeth around the disc edge, and the disc touching the seat at a certain angle, this product is a compact, lightweight and highly cost-effective, high-performance rotary control valve that exhibits outstanding control characteristics. The valve provides steady control over a wide range with higher rangeability, better cavitation resistance, lower dynamic torque, lower noise level, and a better leakage rate than any other rotary control valve.

Two models, the 507V and 508V, are available for a range of severe applications. The 507V is the optimum type for fluid control of high pressure, high temperature systems. The 508V is characterized by its rubber seat ring, and eliminates the need for any additional stop valve because of its complete sealing capability.

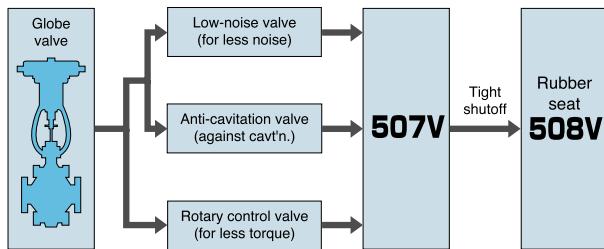

## Fundamental Structure

This product has two basic design features that are responsible for the outstanding performance. One is the teeth around the disc and the other is the gull-wing-like design of the disc.

The teeth on the circumference of the disc break up the fluid energy acting on it with a resultant reduction of pressure recovery.

Unlike conventional flat discs, the gull-wing-like disc of the product touches the seat at a certain angle for reduced seating/unseating torque. This results in steady control of the valve.

## Recent trend toward rotary type control valves

## Standard Specifications

Valve nominal size	50 to 400mm		
Pressure rating	50 to 200mm: ANSI Class 300lb 250 to 400mm: ANSI Class 150lb		
Actuator mounting	Non-flange joint		
Flange accommodation	JIS: 10K/16K/20K, ANSI Class 150lb, ANSI Class 300lb, DIN NP 10/16/25 Please contact us when 250mm/16K and over.		
Service temperature <sup>※1</sup>	Cast steel	-10 to 400 degrees C. Following materials are used for 200 degrees C or higher – carbon for bearings, exfoliated graphite	
	Stainless steel	-50 to 400 degrees C. Following materials are used for 200 degrees C or higher – carbon for bearings, exfoliated graphite	
Rangeability	100:1		
Valve opening	Max. 70°		
Flow characteristics	Equal percent		
Leakage rate <sup>※2</sup>	FCI 70-2 Class II		
Stuffing box	Studs and nuts tightening		
Standard materials	Body	50 to 200mm	Cast steel SCPH2
		250 to 400mm	Cast steel SCPH2
	Disc <sup>※3</sup>	50 to 150mm	Cast steel SCPH2
		200 to 400mm	Ductile iron FCD450
	Stem	Stainless steel SUS630 (SUS316) <sup>※4</sup>	
	Bearings	Reinforced PTFE	Reinforced PTFE
	Packings	Exfoliated graphite	Exfoliated graphite
	Gland flange	Stainless steel	Stainless steel

<sup>※1</sup> Please consult us if the application is in the range of 400 to 600 degrees C.

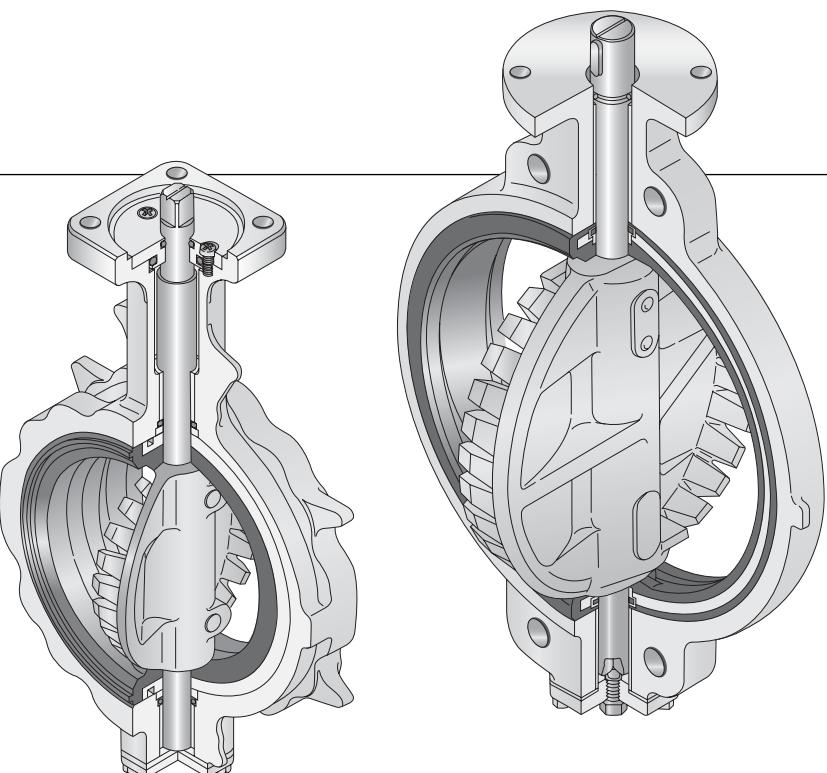

<sup>※2</sup> The disc is gull wing shaped and touches the metal seat at an angle. This design minimises leakage to a level less than 0.5% of the rated Cv which is equal to or lower than the leakage permitted on a double-seat globe control valve.

<sup>※3</sup> The disc is electroless plated with nickel.

<sup>※4</sup> Please consult us if an SUS316 stem is required.

## Rotary Control Valve with Tight Shut-off and High Grade Rubber Seat

# 508V

### Features and Benefits

Except for the rubber seat ring, the 508V has the same design principle as the 507V. Excellent controllability is achieved by having the innovative teetted disc seating at a certain angle. The 508V has a reinforced core rubber seat ring allowing it to be used for high pressure service up to 1.6MPa with complete tight shut-off.

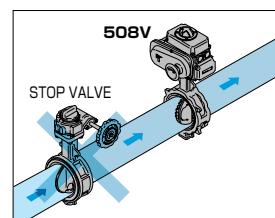

#### Rubber seat ring with a "control cosine curve" profile

Taking into consideration the cosine curve profile rubber seat ring incorporated into our models 700G and 773Z, we developed a new type of seat ring for exclusive use in the 508V. The 508V has a reinforced core rubber seat ring incorporated with a "control cosine curve" profile for sizes between 50mm and 200mm. This seat ring design ensures a tight shut-off up to a working pressure of 1.6MPa.

The 508V available in sizes between 250mm and 350mm has a similar seat ring design and profile, but the seat ring is backed up by a precisely formed metal core which is encapsulated inside the rubber. This design enables the control valve to function under severe conditions of high velocity, a large differential pressure or a high vacuum. (The maximum allowable shut-off pressure is 1.0MPa).

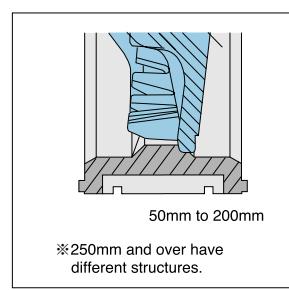

#### No additional stop valve, less installation space and less cost

Because of its reliable sealing effect against a high differential pressure, the 508V does not require an additional stop valve. You save on installation space and benefit from the excellent cost effective features of our rotary control valve.

#### Satisfies both JIS and ISO standards for extended applications

The 508V is available in different flange specifications. Also, its face-to-face dimension meets both JIS and ISO requirements. Therefore this model is applicable for various industrial applications worldwide.

## General

With guide-vane-like teeth around the disc edge, and the disc touching the seat at a certain angle, this product is a compact, lightweight and highly cost-effective, high-performance rotary control valve that exhibits outstanding control characteristics.

The valve provides steady control over a wide range with higher rangeability, better cavitation resistance, lower dynamic torque, lower noise level, and a better leakage rate than any other rotary control valve.

Two models, the 507V and 508V, are available for a range of severe applications. The 507V is the optimum type for fluid control of high pressure, high temperature systems. The 508V is characterized by its rubber seat ring, and eliminates the need for any additional stop valve because of its complete sealing capability.

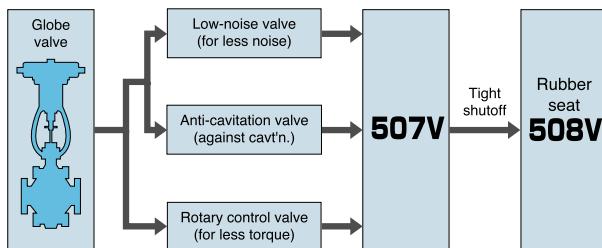

## Fundamental Structure

This product has two basic design features that are responsible for the outstanding performance. One is the teeth around the disc and the other is the gull-wing-like design of the disc.

The teeth on the circumference of the disc break up the fluid energy acting on it with a resultant reduction of pressure recovery.

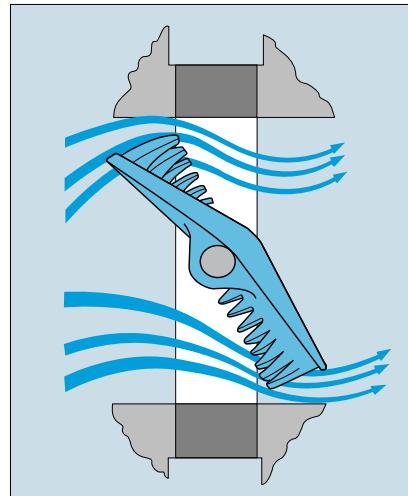

Unlike conventional flat discs, the gull-wing-like disc of the product touches the seat at a certain angle for reduced seating/unseating torque. This results in steady control of the valve.

## Recent trend toward rotary type control valves

## General Description

With a specially designed rubber seat ring, Model 508V ensures tight shut-off and eliminates the need for any additional stop valve required by conventional control valves. The high performance characteristics of this model originate from its unique design with a teeth and gull-wing shaped disc that touches the seat at a certain angle (Fig.1). The teeth are arranged on the circumference of the disc towards either direction of flow. The 'touchat-an-angle' disc assists the reduction of seating and unseating torque and facilitates smooth control of the valve. Other benefits include high rangeability, low noise level and anti-cavitation. The face-to-face dimension meets both JIS and ISO standards so the 508V is applicable for various industrial fields including air conditioning systems.

Valve nominal size	50, 80, 100, 150, 200mm	250, 300, 350mm	400, 450, 500, 600mm
Face-to-face dimensions *1	JIS B 2002 Series 46 / ISO 5752 Basic Series 20 Wafer butterfly valve (short)		
Flange accommodation	JIS: 5K/10K/16K/20K, ANSI 150lb, DIN NP 10/16, BS 4504 PN 10/16, BS10 'E', 'F', JIS G 5524, 5527	JIS: 10K/16K, ANSI 150lb, DIN NP 10/16, BS 4504 PN 10/16, BS10 'E', 'F', JIS G 5524, 5527	JIS: 10K, ANSI 150lb, DIN NP 10/16, BS 4504 PN 10/16, JIS G 7.5, 5527
Service temperature	-20 to 120 degrees C (NBR: -10 to 80 degrees C)		-10 to 80 degrees C (*EPDM: -20 to 120 degrees C)
Max. working pressure	1.6MPa (NBR: 1.0MPa)	1.0MPa	
Body test pressure	2.4MPa (NBR: 1.5MPa)	1.5MPa	
Seat leak pressure	1.8MPa (NBR: 1.1MPa)	1.1MPa	
Flow characteristics	Nearly equal percent		
Rangeability	100:1		
Standard materials	Body	FCD450 (No fluid exposure)	
	Disc	SCS14	SCS13
	Stem	SUS420J2 (No fluid exposure)	
	Seat ring	*EPDM core-reinforced (Option – NBR core-reinforced)	NBR core-reinforced (Option – *EPDM core-reinforced)

\*1 350mm only : JIS B 2002 Series 47 / ISO Basic Series 25 (Medium)

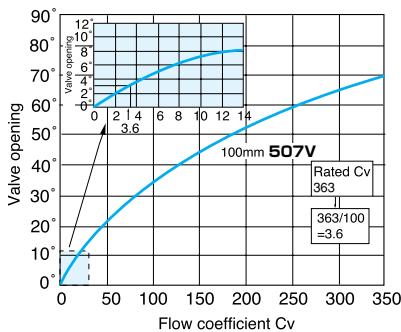

\* Never use an EPDM rubber seat ring if the valve is being used for oil or for a fluid containing even a slight amount of oil.

## Multiple merits for multiple applications

### Controllability

#### High rangeability

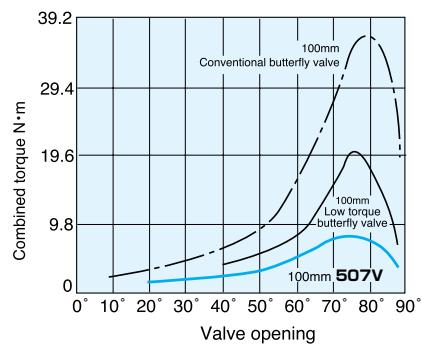

- \*The wide range of controllability permits flexible adjustment to any changes in the process conditions of production lines. This merit is especially beneficial to multifold productions.
- \*The conventional "split range control" with twin valves is no longer required. One product is enough to cover the whole range.

With its nearly "equal percent" flow characteristics and its very low leakage rate, the product offers an extremely high rangeability of 100:1.

#### Low dynamic torque

- \*The steady performance ensures more precise control.
- \*The compact actuator saves space and energy.

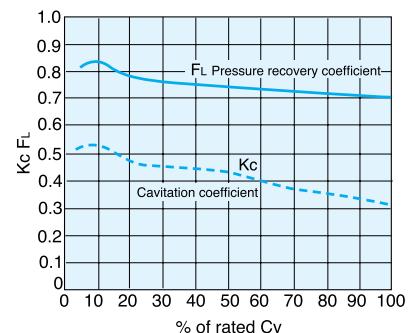

The above graph shows a comparison of the product with other typical valves. The patented disc has remarkably reduces the dynamic torque.

### Reliability

#### Excellent cavitation resistance

- \*The outstanding cavitation resistance increases the operational life of the valve and pipeline, and improves the reliability of the system.
- \*This model is works in more severe requirements than ever.

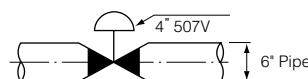

A high coefficient of initial cavitation (KC), and a high pressure recovery coefficient (FL), inhibit the occurrence of cavitation.

## Environmental considerations

### Low noise level

\*Provides better work environment.  
\*Especially in air and gas applications, this product has a lower noise level by 5 to 10dBA and meets and exceeds noise regulations

The teeth on the disc cut the flow into fine jet streams.  
This is the most effective device for lowering the noise level when the valve is half open.

## Cost merit

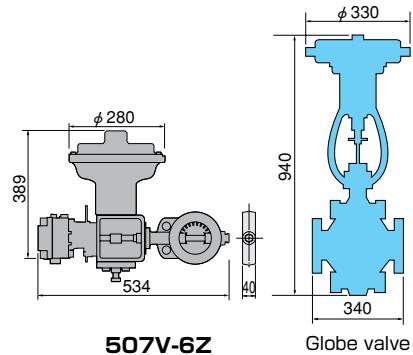

### Larger valve capacity

\*Reduces loss of energy at the fully open position.  
\*Allows one to two sizes of valve reduction in comparison with a conventional valve.

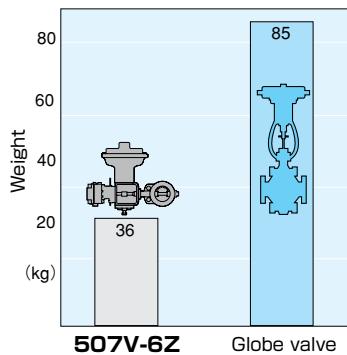

### Compact and lightweight design

\*Permits compact piping arrangement.  
\*Allows the use of a portable remote controller unit.  
\*Eliminates vibration problems of the piping system, and improves operational life.

Comparison of dimensions  
(Nominal size: 80mm)

Comparison of weight  
(Nominal size: 80mm)

### Simple design

\*Permits easy control of spare parts.  
\*Facilitates easy maintenance.  
\*Has a reduced number of parts and improved reliability.

Remark1: ○=Applicable ×=Not applicable

Remark2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

## 508V Pressure-Temperature Rating

### 508V Allowable differential pressure for 6X and 6W

(kPa)

Nominal size		Valve opening							
mm	inch	0°	10°	20°	30°	40°	50°	60°	70°
50	2	1600	685	334	148	86	59	45	40
80	3	1400	694	475	308	176	116	69	47
100	4	800	765	575	315	204	133	69	37
150	6	1600	783	546	360	219	152	90	44
200	8	1600	676	453	287	178	124	79	44

### 508V Allowable differential pressure on stem

(kPa)

Nominal size		Valve opening							
mm	inch	0°	10°	20°	30°	40°	50°	60°	70°
50	2	1600	685	334	148	86	59	45	40
80	3	1600	694	475	308	176	116	69	47
100	4	1600	765	575	315	204	133	69	37
150	6	1600	783	546	360	219	152	90	44
200	8	1600	676	453	287	178	124	79	44
250	10	1000	562	233	149	84	58	37	21
300	12	1000	220	232	149	84	58	37	21
350	14	1000	367	222	116	65	45	29	16
400	16	1000	209	118	58	52	46	33	25
450	18	1000	223	197	115	56	48	33	26
500	20	1000	162	143	97	55	44	30	23
600	24	1000	246	171	110	54	49	41	27

The above is based on the result at our test plant. The test was conducted with fresh water at ambient temperature. Therefore, please use the data for reference only.  
Consult us if you have a question or doubt.

### 508V Maximum velocity

Fresh water	Short period	10m/s
	Continuous	7m/s
Sea water	Short period	10m/s
	Continuous	5m/s
Air (ambient temp.)	Short period	80m/s
	Continuous	30m/s

The maximum velocity shown is estimated as an average in the fully open state.

Remark: "Short period" means a few minutes creating high velocity until the disc angle reaches the designated position.

Remark: Bold and nut material: SS400/SS400 and SUS 304/SUS04.

Long bold uses full threaded bolt.

Use thin hexagon nut. (Use heavy hexagon nut for ANSI150Lb.)

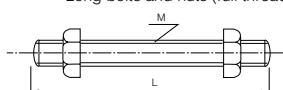

A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

Example

Long bolts: 12 - M22 × 185

N	M	L
---	---	---

Long bolts and nuts (full thread)

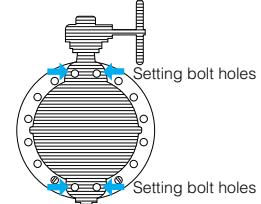

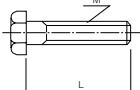

Setting bolts: 4 - M30 × 95

(Hexagon bolts)

N	M	L
---	---	---

Setting bolts (Hexagon bolts)

## Rotary Process Valve to Suit 150 lb / 300 lb Rating

# DTM

Diaphragm

Worm Gear

Pneumatic Cylinder

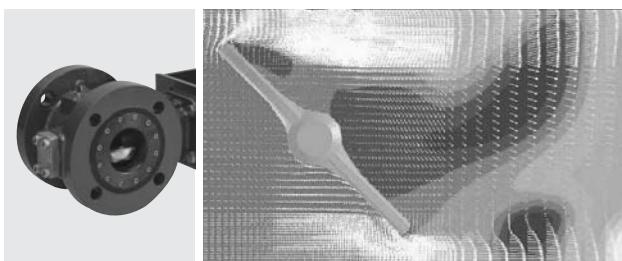

Motorized

### General Description

The Ultimate Rotary Control DTM provides high accurate control under most critical process conditions including higher pressure drop liquid/gas applications.

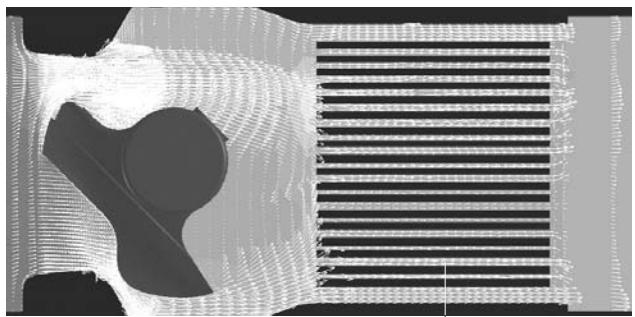

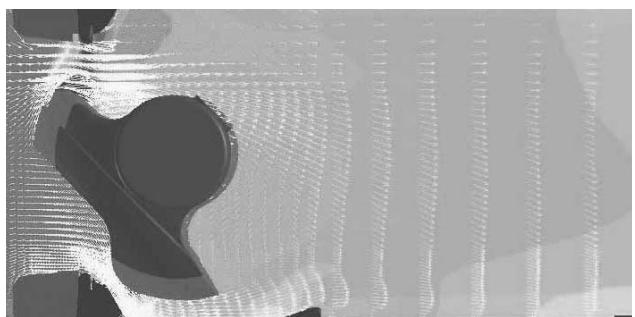

DTM series valves can be supplied with or without integrated cavitation breaker in order to reduce noise level by max. 30 dB. Valves in this series also exhibit higher anti-cavitation capability.

**Conventional Butterfly Valve**

Local static pressure drop and quick pressure recovery causes cavitation

### DTM Series

**Cavitation breaker**

(Note) Colors show the pressure distribution. Red means a high pressure and blue means a low pressure.

## Features and Benefits

The ultimate rotary control DTM valve provides accurate control and low noise levels, even at high velocities.

### Wide rangeability, 100:1

Improves flow control with a wide range of control from closed to fully open.

### Noise reduction by 20dB or more

Features the latest anti-cavitation technology pioneered by TOMOE that delivers superior control and low turbulence in the line. As a result, there is a 20dB reduction in flow induced valve noise and associated damage to piping and equipment compared to conventional valves.

### Can handle high differential pressure

Capable of handling extremely high differential pressure with control in the opening range of 0 – 30% and differential pressures greater than 2MPa.

### High performance seat structure

Excellent durability and high performance characteristics achieved with metal seat design. Seat leakage of Class V and Rate A for a soft seal.

### Ease of maintenance

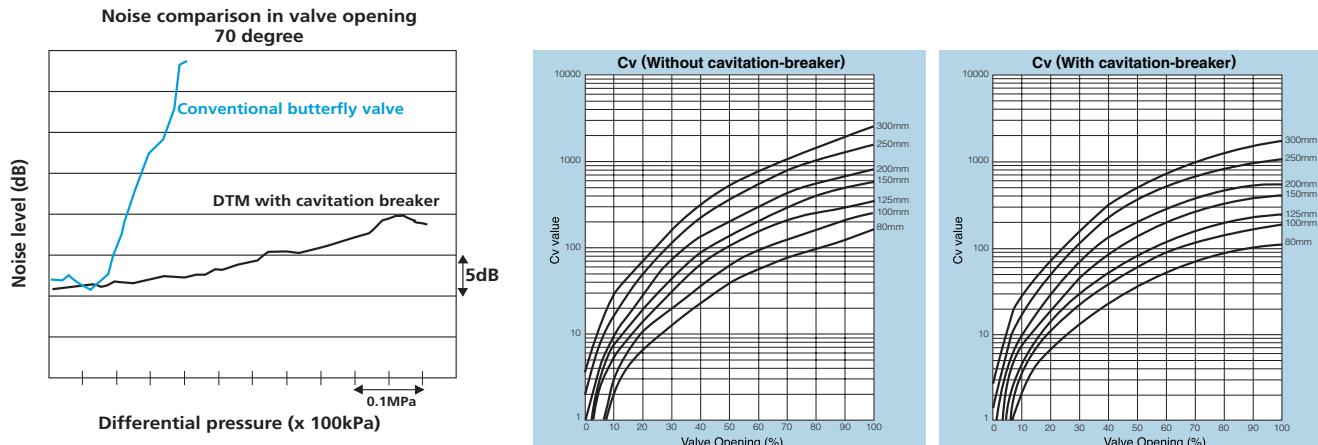

Designed for easy maintenance – for example, seat and cavitation breaker can be replaced simply and quickly.

### High performance diaphragm actuator

A new high performance diaphragm pneumatic actuator that is compact, highly accurate and has proven long life in the field has been designed to manage the DTM valve actuation process with optimum efficiency.

### Optional RPTFE seat

The DTM is also available with an RPTFE seat which provides zero leakage to ISO 5208 Rate A.

## Standard Specifications

Valve type	Rotary control butterfly valve (with low noise characteristics)	
Valve nominal size	80, 100, 125, 150, 200, 250, 300mm	
Pressure rating	ASME B 16.5 Class 150, 300mm	
Applicable flange standard	JIS10, 16, 20, 30K, ASME B 16.5 CLASS 150, 300	
Body Style	Double flanged	
Face-to-face dimensions	IEC 60534-3-2 (JIS B 2005-3-2)	
Flow characteristics	Equal percent	
Rangeability	100:1	
Flow direction	Flowing from seat side	
Max. working pressure / Closed	Class 150 : 2MPa / Class 300 : 5.1MPa	
Max. differential pressure / Open by 30%	Class 150 : 0.8MPa / Class 300 : 2MPa	
Seat leakage	ANSI B 16.104 Class V (9ANSI/FCI 70-2)	ISO 5208 Rate A (Zero leakage)
Temperature range	-29 to 400 degrees C	-10 to 230 degrees C
Standard materials	Body	WCB or CF8M
	Disc	CF8M
	Stem	Stainless steel
	Seat ring	Stainless steel
	Cavitation breaker	RPTFE
Applicable gaskets	Any standard gasket with inner/outer ring can be used	
Actuator	Diaphragm actuator, pneumatic cylinder, motorised
